

## Lecture :- Math :- GCD

### Agenda

- Permutation
- Combination
- Gcd basic
- Delete one

## Permutation

- Arrangement of objects.
- In permutation, order matters
- To simplify  $(i, j) \neq (j, i)$

abc:   
abc  
bac  
cba  
acb  
bca  
cab

Qul Given 3 distinct characters. In how many ways can we arrange them?

s = "abc"

abc   bac   cab  
acb   bca   cba

$$\frac{3}{\uparrow \begin{smallmatrix} a \\ b \\ c \end{smallmatrix}} \quad \frac{2}{\uparrow} \quad \frac{1}{\uparrow} = 3 * 2 * 1 = 3!$$

a	b	c
b	a	c
c	a	b

In how many ways  $n$  distinct characters can be arranged?

$n!$

### nPr formulae

Q. Given 5 distinct characters, in how many places can we arrange them in 2 places?

$$\begin{array}{c} 5 \\ \uparrow \end{array} \begin{array}{c} 4 \\ \uparrow \end{array} = 5 * 4 = 20$$

a b c d e.

ab	ba	ca	da	ea
ac	bc	cb	db	eb
ad	bd	cd	dc	ec
ae	be	ce	de	ed

Q. Given 5 distinct characters, in how many places can we arrange them in 3 places?

$$\begin{array}{c} \overline{\quad} \\ \uparrow \\ 5 \end{array} \begin{array}{c} \overline{\quad} \\ \uparrow \\ 4 \end{array} \begin{array}{c} \overline{\quad} \\ \uparrow \\ 3 \end{array} = 5 * 4 * 3 = 60$$

Q. Given 5 distinct characters, in how many places can we arrange them in 4 places?

$$5 * 4 * 3 * 2 = 120$$

Q. Given n distinct characters, in how many places can we arrange them in 3 places?

$$\begin{array}{c} n \\ \uparrow \end{array} \begin{array}{c} n-1 \\ \uparrow \end{array} \begin{array}{c} n-2 \\ \uparrow \end{array} = n * (n-1) * (n-2)$$

Q. Given  $n$  distinct characters, in how many places can we arrange them in 4 places?

$$n * n-1 * n-2 * n-3$$

Q. Given  $n$  distinct characters, in how many places can we arrange them in  $r$  places?

$$\begin{array}{ccccccc} \frac{n}{\uparrow} & \frac{n-1}{\downarrow} & \frac{n-2}{\downarrow} & \frac{n-3}{\downarrow} & \frac{n-(r-1)}{\downarrow} & & \\ & & & & r\text{th position} & & \end{array}$$

$$\text{Ans} = n * n-1 * n-2 * n-3 \dots n-(r-1)$$

Multiply & divide by  $(n-r)!$

$$\frac{n * n-1 * n-2 \dots n-r+1 * n-r * n-r-1 * n-r-2 \dots 1}{(n-r)!}$$

$$\frac{n!}{(n-r)!} = {}^n P_r$$

$n$  distinct objects,  
arrange them at  $r$   
places

## Combination

- No of ways to select something
- Order of selection does not matter
- To simplify  $(i, j) = (j, i)$

Qul Given 4 players, count no. of ways of selecting 3 players.

Rohit Konli Warner Head

Rohit Konli Warner

Rohit Konli Head

Konli Warner Head

Rohit Warner Head

$${}^4C_3 = 4$$

$\Rightarrow 4$

Ques No. of ways to arrange 4 players in 3 slots.

Rohit   Konli   Conway   Gill

1. Rohit  
Konli  
Conway.

R	K	C
R	C	K

Conway  
Gill

⋮

6

for every possible selection = 6 arrangements.

1 sel = 6 arrangements

4 sel =  $6 \times 4 = 24$  arrangements.

Qn Given  $n$  distinct items, how many ways can we select  $r$  items & such that  $0 \leq r \leq n$ .  
arrange

$$1 \text{ selection} = r! \text{ arrangements}$$

$$r! \text{ arrangements} = 1 \text{ selection}$$

$$1 \text{ arrangement} = \frac{1}{r!} \text{ selection}$$

$$nPr \text{ arrangements} = \frac{nPr}{r!}$$

$$nCr = \frac{n!}{r!(n-r)!}$$

## Property of combination

Property 1 No. of ways of selecting 0 items from n items, i.e., no. of ways to not select anything, will always be 1.

$${}^nC_0 = \frac{n!}{0!(n-0)!} = \frac{n!}{n!} = 1.$$

Property 2 No. of ways of selecting n items from n items, i.e., no. of ways to not select anything, will always be 1.

$${}^nC_n = \frac{n!}{n!(n-n)!} = \frac{n!}{n! * 0!} = 1.$$

$$\boxed{{}^nC_0 = {}^nC_n}$$

Property 3 No. of ways of selecting  $(n-r)$  items from  $n$  items, i.e., no. of ways to not select anything, will always be 1.

$$\begin{aligned} nC_{n-r} &= \frac{n!}{(n-r)! (n-(n-r))!} \\ &= \frac{n!}{(n-r)! (0-0+r)!} \\ &= \frac{n!}{r! (n-r)!} = nC_r \end{aligned}$$

$$nC_{n-r} = nC_r$$

Property 4 Given  $n$  distinct elements, select  $r$  items.  $n C_r$

$$n C_r = n-1 C_{r-1} + n-1 C_r$$

Example:

s  
a  
v

srk

s  
a  
v

Ranbir

s  
r  
v

Akshay

r  
a  
v

varun. (3 actors)

Select: srk

$3 C_2$

s r a

s r v

s a v

Not selecting:

$3 C_3$   
(1)

→ ranbir  
Akshay  
varun

$$\text{Ans} = 3 C_2 + 3 C_3$$

$$n-1 C_{r-1} + n-1 C_r$$

# Pascal's triangle

$n = 3$

0	—	1					
1	—	1	1				
2	—	1	2	1			
3	—	1	3	3	1		
4	—	1	4	6	4	1	
5	—	1	5	10	10	5	1

1
1 1
1 2 1

0 — 1	$0c_0$
1 — 1 1	$1c_0 \quad 1c_1$
2 — 1 2 1	$2c_0 \quad 2c_1 \quad 2c_2$
3 — 1 3 3 1	$3c_0 \quad 3c_1 \quad 3c_2 \quad 3c_3$
4 — 1 4 6 4 1	$4c_0 \quad 4c_1 \quad 4c_2 \quad 4c_3 \quad 4c_4$
5 — 1 5 10 10 5 1	$5c_0 \quad 5c_1 \quad 5c_2 \quad 5c_3 \quad 5c_4 \quad 5c_5$

Example:

$$5c_2 = 4c_1 + 4c_2$$

$$n_{cr} = n-1c_{r-1} + n-1c_r$$

↑  
solved using DP.

$$c[i][j] = c[i-1][j-1] + c[i-1][j]$$

$\uparrow \quad \uparrow \quad \uparrow \quad \uparrow$   
 $n \quad r \quad n-1 \quad r-1 \quad n-1 \quad r$

### Pseudo-code

```
int[][] pascalTriangle(int n) {  
    c[n][n];  
    for (i=0; i<n; i++) {  
        c[i][0] = 1;  
        c[i][i] = 1;  
  
        for (j=1; j<i; j++) {  
            c[i][j] = c[i-1][j-1] + c[i-1][j];  
        }  
    }  
    return c;  
}
```

TC:  $O(n^2)$

SC:  $O(n^2)$  /  $O(1)$

Ques: finding nth column tile. (Amazon, Google) Excel sheets

1	2	3	.....	25	26	27	28	...	52	53	54	.....
A	B	C		Y	Z	aa	ab		az	ba	bb	...

ans = getCode(rem) + ans;

$$n = \frac{n-1}{26};$$

}

return reverse(ans);

0 - a  
1 - b  
2 - c

TC:  $\log_{26} n$ .

SC:  $O(1)$

Break: 8:40 - 8:50

## Gcd basics

Gcd  $\rightarrow$  Greatest common divisor

$$\text{gcd} = \text{hcf}$$

hcf  $\rightarrow$  highest common factor

$\text{gcd}(a, b) \rightarrow$  greatest factor dividing  $a$  &  $b$

If we have  $\text{gcd}(a, b) = x$ .

$$a \% x = 0$$

$$b \% x = 0$$

$x$  is highest factor of  $(a, b)$

Example  $\text{gcd}(15, 25) = 5$

$$\text{gcd}(12, 30) = 6$$

$$\text{gcd}(10, -25) = 5$$

$$\text{gcd}(0, 4) = 0 \times \quad \begin{array}{l} 0 \% 4 = 0 \\ 4 \% 4 = 0 \end{array}$$

4 ✓

$$\text{gcd}(0, -10) = \quad \begin{array}{l} 0 \% 10 = 0 \\ -10 \% 10 = 0 \end{array} = 10$$

✓

$$\text{gcd}(0, 0) = \begin{array}{l} 0 \% 1 \\ \% 2 \\ \% 3 \\ \vdots \\ \infty \end{array} \quad \begin{array}{l} 0 \% 1 \\ \% 2 \\ \% 3 \\ \vdots \\ \infty \end{array} \quad \underline{\text{infinity}}$$

## Properties of gcd

$$\gcd(a, b) = \gcd(b, a)$$

$$\begin{array}{cc} \gcd(4, 6) & \gcd(6, 4) \\ \uparrow & \downarrow \\ 2 & 2 \end{array}$$

$$\gcd(0, A) = |A| \text{ abs}(A)$$

$$\gcd(0, 4)$$

$$\gcd(0, -4)$$

$$\gcd(a, b, c) = \gcd(a, \gcd(b, c))$$

$$\gcd(\gcd(a, b), c)$$

$$\gcd(\gcd(a, c), b)$$

$$\begin{array}{l} \gcd(\overbrace{4, 8}^4, 18) = 2 \\ \gcd(\underbrace{8, 4}_4, 18) = 2 \\ \gcd(\underbrace{8, 18}_2, 4) = 2 \end{array}$$

## Special property of gcd

$$\gcd(8632, 8650)$$

tough to find

=

$$\gcd(8632, 18)$$

easy to find

## Euclid algorithm

$$* \gcd(a, b) =$$

$$\gcd(a-b, b)$$

$$a, b > 0 \text{ \& } a \geq b$$

$$\gcd(a, b) = \gcd(a \% b, b)$$

Extended Euclid algo.

$$\gcd(23, 5)$$

$$\gcd(3, 5)$$

$$\gcd(23, 5) = 1$$

$$\gcd(18, 5)$$

$$\gcd(13, 5)$$

$$\gcd(8, 5)$$

$$\gcd(3, 5) = 1$$

Ques Write a function to find  $\text{gcd}(a, b)$ .

$a > b$   
 $b > a$

```
int gcd(a, b) {  
    if (b == 0) {  
        return a;  
    }  
    return gcd(b, a % b);  
}
```

TC:  $\log(\max(a, b))$   
SC: Recursive space.

$\text{gcd}(120, 270)$   
↓  
 $\text{gcd}(120, 30)$   
↓  
 $\text{gcd}(0, 30)$   
↑ ans = 30

$\text{gcd}(380, 140)$   
↓  $380 \% 140$   
 $\text{gcd}(140, 100)$   
↓  $140 \% 100$   
 $\text{gcd}(100, 40)$   
↓  $100 \% 40$   
 $\text{gcd}(40, 20)$   
↓  $40 \% 20$   
 $\text{gcd}(20, 0)$

Ques: Given an array, calculate gcd of entire array.

arr = 

6	12	15
---	----	----

 $\rightarrow \text{gcd}(\text{arr}) = 3$

```
int gcdArray(arr[]){  
    ans = arr[0];  
    for (i=1; i<arr.length; i++){  
        ans = gcd(ans, arr[i]);  
    }  
    return ans;  
}
```

Qn: Given  $arr[n]$  elements. delete one element such that gcd of remaining elements becomes maximum.

	0	1	2	3	4
$arr[] =$	24	16	18	30	15

Delete one element of array.	gcd of remaining el of array.	ans.										
<table><tr><td>0</td><td>1</td><td>2</td><td>3</td><td>4</td></tr><tr><td><del>24</del></td><td>16</td><td>18</td><td>30</td><td>15</td></tr></table>	0	1	2	3	4	<del>24</del>	16	18	30	15	$gcd(16, 18, 30, 15)$	1
