

Lecture :- Array 2

Agenda

- find k in row and col wise sorted matrix
- Row with maximum number of 1's
- Boundary print of matrix
- Spiral order of a matrix
- Sum of all submatrices sum.

Q1 Given a row and col wise sorted matrix.

find out whether k is present or not. (☆☆☆)

	0	1	2	3
0	-5	-2	1	13
1	-4	0	3	14
2	-3	2	6	18

k=13 (true)

k=2 (true)

k=15 (false)

Brute force:

```
int findKInSortedMatrix(int[][] mat) {  
    int n = mat.length;  
    int m = mat[0].length;  
    for(i=0; i<n; i++) {  
        for(j=0; j<m; j++) {  
            if(mat[i][j] == k) {  
                return true;  
            }  
        }  
    }  
    return false;  
}
```

TC: $O(n \cdot m)$

SC: $O(1)$

Approach 2

	0	1	2	3
0	5	10	15	20
1	6	12	18	24
2	7	14	21	28
3	8	16	24	32

↓ return false;

$k = 13$

	0	1	2	3
0	5	10	15	20
1	6	12	18	24
2	7	14	21	28
3	8	16	24	32

return true.

$k = 16$

	0	1	2	3
0	5	10	15	20
1	6	12	18	24
2	7	14	21	28
3	8	16	24	32

return true.

$k = 32$

Algorithmic code

```
boolean search(int[][] mat, int k) {  
    int n = mat.length;  
    int m = mat[0].length;  
    int i = 0;  
    int j = m - 1;  
    while(i < n && j >= 0) {  
        if(mat[i][j] == k) {  
            return true;  
        }  
        if(mat[i][j] < k) {  
            i++;  
        }  
        else if(mat[i][j] > k) {  
            j--;  
        }  
    }  
    return false;  
}
```

TC: $O(n)$

SC: $O(1)$

Problem 2

Given a **binary sorted matrix** of size $n \times n$. find row with maximum number of 1.

Note. 1> If two rows have maximum no. of 1 then return the row with lower idx.

2> Assume each row is sorted by values

	0	1	2
0	0	1	1
1	0	0	1
	0	1	1

ans = 0

0	0	0	0
0	0	0	1
0	0	1	1
0	1	1	1

3rd row

Brute force:

TC: $O(n \times n)$

SC: $O(1)$

Approach 2

	0	1	2	3	4	5
0	0	0	0	0	1	1
1	0	0	1	1	1	1
2	0	0	0	0	0	1
3	0	0	0	0	1	1
4	0	1	1	1	1	1

ans = ~~1~~ ~~2~~ ~~3~~ ~~4~~ 5

Algorithmic code

```
int maxonesRow(int[][] matrix) {  
    n = mat.length;  
    i = 0;    j = n-1;  
    while(i < n && j >= 0) {  
        while(j >= 0 && mat[i][j] == 1) {  
            j--;  
            ans = i;  
        }  
        i++;  
    }  
    return ans;  
}
```

TC: $O(n)$

SC: $O(1)$

Problem 3

Boundary level printing

Given $mat[n][n]$, print boundary elements in clockwise direction.

	0	1	2	3	4
0	1	2	3	4	5
1	6	7	8	9	10
2	11	12	13	14	15
3	16	17	18	19	20
4	21	22	23	24	25

output

```

1   2   3   4   5
10  15  20  25  24
23  22  21  16  11  6

```

	0	1	2
0	1	2	3
1	4	5	6
2	7	8	9

output

Algorithmic code

```
void boundaryPrint(int[][] mat) {  
    n = mat.length;  
    i = 0;  
    j = 0;  
  
    // 0th row.  
    for(k=0; k<n-1; k++) {  
        print(mat[i][j]);  
        j++;  
    }  
  
    // Last column.  
    for(k=0; k<n-1; k++) {  
        print(mat[i][j]);  
        i++;  
    }  
  
    // Last row.  
    for(k=0; k<n-1; k++) {  
        print(mat[i][j]);  
        j--;  
    }  
  
    // first column.  
    for(k=0; k<n-1; k++) {  
        print(mat[i][j]);  
        i--;  
    }  
}
```

TC: $O(n) + O(n) + O(n) + O(n) \approx O(n)$

SC: $O(1)$

H/w Extend mat[n][m].

Spiral order matrix

Given $mat[n][n]$, print spiral order of matrix in clockwise direction.

	0	1	2	3	4	5
0	1	2	3	4	5	6
1	7	8	9	10	11	12
2	13	14	15	16	17	18

4	25	26	27	28	29	30
5	31	32	33	34	35	36

output		(k)
i	j	Loop print
0	0	5 (n-1)
1	1	3 (n-3)
2	2	1 (n-5)

Approach

	0	1	2	3	4	5
0	1	2	3	4	5	6
1	7	8	9	10	11	12
2	13	14	15	16	17	18
3	19	20	21	22	23	24
4	25	26	27	28	29	30
5	31	32	33	34	35	36

	0	1	2	3	4
0	1	2	3	4	5
1	6	7	8	9	10
2	11	12	13	14	15
3	16	17	18	19	20
4	21	22	23	24	25

i	j	k(loop print)
0	0	4(n-1)
1	1	2(n-3)
2	2	0(n-5)

```

if (loop print == 0) {
    print(mat[i][j]);
}

```

Algorithmic code

```
void spiralOrder(int[][] mat) {  
    n = mat.length;  
    i = 0; j = 0; loopPrint = n-1;  
    while( loopPrint >= 0)  
        if( loopPrint == 0) {  
            print( mat[i][j]);  
            break;  
        }  
    // 0th row.  
    for(k=0; k< loopPrint; k++) {  
        print( mat[i][j]);  
        j++;  
    }  
    // Last column.  
    for(k=0; k< loopPrint; k++) {  
        print( mat[i][j]);  
        i++;  
    }  
    // Last row.  
    for(k=0; k< loopPrint; k++) {  
        print( mat[i][j]);  
        j--;  
    }  
    // first column.  
    for(k=0; k< loopPrint; k++) {  
        print( mat[i][j]);  
        i--;  
    }  
    i++;  
    j++;  
    loopPrint -= 2;  
}
```

TC: $O(n^2)$

SC: $O(1)$

Break: 8:43 - 8:53

Submatrices and its identification

Subarray is continuous and ordered part of array

Submatrix is " " " " " matrix.

	0	1	2	3	4
0	1	2	3	4	5
1	6	7	8	9	10
2	11	12	13	14	15
3	16	17	18	19	20
4	21	22	23	24	25

Submatrices

1	2	3	4
---	---	---	---

Subarrays:

1
1 2
1 2 3
1 2 3 4
2
2 3
2 3 4
3
3 4
4

Problem 5

Sum of all submatrices sum

Given $\text{mat}[n][m]$, determine sum of all the possible submatrices.

	0	1	2
0	4	9	6
1	5	-1	2

All submatrices

$$[4] = 4$$

$$[9] = 9$$

$$[6] = 6$$

$$[5] = 5$$

$$[-1] = -1$$

$$[2] = 2$$

$$[4 \ 9] = 4 + 9$$

$$[4 \ 9 \ 6] = 4 + 9 + 6$$

$$\begin{bmatrix} 4 & 9 \\ 5 & -1 \end{bmatrix} = 4 + 5 + 9 + (-1)$$

$$\begin{bmatrix} 4 & 9 & 6 \\ 5 & -1 & 2 \end{bmatrix} = 4 + 9 + 6 + 5 + (-1) + 2$$

$$[9 \ 6] = 9 + 6$$

$$\begin{bmatrix} 9 & 6 \\ -1 & 2 \end{bmatrix} = 9 + 6 + (-1) + 2$$

$$\begin{bmatrix} 4 \\ 5 \end{bmatrix} = 4 + 5$$

$$\begin{bmatrix} 9 \\ -1 \end{bmatrix} = 9 + (-1)$$

$$\begin{bmatrix} 6 \\ 2 \end{bmatrix} = 6 + 2$$

$$[-1 \ 2] = -1 + 2$$

$$[5 \ -1] = 5 + (-1)$$

$$[5 \ -1 \ 2] = 5 + (-1) + 2$$

Approach

$$\text{sum} = 4 * 6 + 9 * 8 + 6 * 6 + (-1) * 8 + 2 * 6 + 5 * 6$$

$$\text{sum} = \text{mat}[0][0] * \text{occ1} +$$

$$\text{mat}[0][1] * \text{occ2} +$$

$$\text{mat}[0][2] * \text{occ3}$$

⋮

$$\text{mat}[n-1][m-1] * \text{occ}_{n-1, m-1}$$

	0	1	2
0	4	9	6
1	5	-1	2

Challenge: find the occurrence.

	0	1	2
0	4	9	6
1	5	-1	2

Occ of 9?

No of start cells for which 9 is part of?

└ 4, 9 \Rightarrow x

No of end cells for which 9 is part of?

└ 2, 6, -1, 9 \Rightarrow y

$$\text{Occurrence} = x * y$$

h/w: $x = ? \rightarrow (i+1) * (j+1)$
 $y = ? \rightarrow (n-i) * (m-j)$
